One Day National Webinar
on
Research Methodology in the Digital Age: Trends and Future Directions
(RMDA 2024)

27th August 2024

About the Webinar

Research methodology in the digital age is marked by the extensive use of big data and real-time data collection, enabling dynamic and comprehensive studies. AI and machine learning technologies have revolutionized data analysis, automated complex tasks and enhancing predictive modelling. Digital surveys and crowdsourcing platforms facilitate quick and cost-effective data gathering. Cloud computing supports global collaboration, while the open science movement promotes transparency and data sharing. Ethical considerations, such as data privacy and algorithmic bias, are critical in this era. Researchers must develop digital literacy and embrace interdisciplinary approaches. Future directions include deeper AI integration, the use of virtual and augmented reality, and a focus on sustainable and ethical research practices. This evolution offers both opportunities and challenges, demanding adaptation and innovation from researchers.
